

The middle Triassic marine invertebrate faunas of North America

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1914 Excerpt: ...whitneyi, Sageceras gabbi, Daonella dubia, and other species: 2. Subgroup of *Ceratites trinodosus*. *Ceratttes* (paraceratites) *Burckhardti* Smith, sp. nov. Plate LII, figures 19-21. Whorls high, robust, increasing rapidly in height, trapezoidal in cross section, deeply embracing. The umbilical shoulders are abruptly rounded, the flanks slightly convex, the ventral shoulders nearly rectangular. The venter is rather broad and surmounted by a strong rounded keel ridge. At maturity the surface is ornamented with weak dichotomous ribs and three rows of tubercles. The umbilical row is weak and numbers 14 to a revolution; the lateral row is much stronger, is situated one-third of the distance up the flanks, and numbers 12 to a revolution; the tubercles on the ventral shoulders are elongated obliquely forward, weaker than the lateral row, and number 23 to a revolution. The height of the whorl is slightly more than half the diameter of the shell, and the width is half the height. The width of the umbilicus is less than one-fourth of the diameter of the shell. The outer whorl embraces about two-thirds of the inner and is indented by it to one-fourth of the height. The septa are ceratitic but could not be exposed sufficiently for illustration. *Ceratites burckhardti* resembles *C. trinodosus* and *C. newberryi*, especially in youth, but at maturity has a broader venter and more angular shoulders. The ventral tubercles are much weaker than on *C. newberryi* and the ribs are weaker. In its obsolescent sculpture *C. burckhardti* resembles *C. cricki*, but its ventral shoulders are more angular and its keel lower. The specific name is given in honor of Dr. Carlos Burckhardt, paleontologist of the Geological Survey of Mexico. Horizon

and locality.--Very rare in the Middle Triassic, Daonel...
